
Integrated Project Management secures synergies

We support your organisation by taking responsibility for:

- Definition of project scope
- Coordination of project stakeholders
- Interface management
- Project management – schedule and cost control, reporting
- Construction site
- Project supervision and documentation

We ensure transparency, a smoothly running project and cost / schedule certainty.

Manufacturing facilities

Integrated Project Management for manufacturing facilities

Production companies maintain large **facilities** with office, production, storage and auxiliary buildings. This also includes internal roads, canals, supply and disposal facilities. The maintenance of the facilities requires high investment in projects that are planned and realized with many external contractors. The multitude of interfaces between administration, plant operation and contractors must be managed and coordinated across all phases.

With our comprehensive project management experience in **real estate, mobility, facility construction and energy projects** we have the know-how to manage or lead **all projects** in **all phases**. From the initiation phase we coordinate the stakeholders to optimise **cost, schedules and quality**. Requirement-based contracts and the management of risk complete the picture.

We are prepared to take over the **complete project management** for you depending on your requirements, from property to infrastructure and to production.
